Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9 and 15, drawn to an intake manifold for an engine having a housing with an interior cavity and a side wall with a substantially planar side wall interior cavity surface, classified in class 123, subclass 184.24.
- II. Claims 10-14 and 16, drawn to an intake manifold including an upper section and a lower section, including a compressor, and reciting the details of the connections between the upper section and the compressor and the upper and lower sections, classified in class 123, subclass 184.34.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as an intake manifold for an engine. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
